Attachments: HPNS Parcel G Preview Text 20180912.docx

Danielle,

I've pasted excerpts of new text into the attached Word file. Unfortunately we're still working on the language in the RBA Work Plan for the first response so I don't have anything to provide you for that one at this time.

Please let me know if you have any questions or need anything else.

Thanks,
John

Good morning -

I'm in the process of pulling together the team's edits today so I should be able to get you some text previews by the end of the day if that works?

Thanks,

John

Hi John,

I know you're planning to send the red-lined Work Plan on Friday, but is it possible to get a preview of this text that you are referring to in some of the responses to comments:

*Clarifying text has been added that describes how to determine whether other offsite background studies are comparable/representative. Specific points of comparison include but are not limited to having comparable/similar NORM constituents, analytical methods, lithology, and latitude.

*Text in the Executive Summary and throughout the Work Plan has been updated to describe an in situ investigation of the open excavation if an exceedance in sidewall or floor material is found.

*The discussion of data evaluation has been revised throughout the document to clarify data evaluation will be performed in two stages: (1) comparison with RGs, and (2) comparison with background.

*The process of data evaluation has been revised to include a maximum likelihood estimate (MLE) to compare individual results with RBA distributions.

It doesn't need to be final text. I just want something to help facilitate some of my internal discussions. I have a meeting set up tomorrow so if I could get excerpts before then, that would be great.

V/r,

Danielle Janda
